

The product

Collano® L Series

What colour is your adhesive?

Coloured adhesives from Collano are not only attractive, but can also be used for security purposes. A coloured adhesive provides security, because it indicates its position. Or, by showing its colours, it signals that the right grade has been used.

Secure and reliable

- Secure concealment: Labels and adhesive tapes conceal reliably when coated with a black adhesive.
- No confusion: When several adhesives are used, confusion can be avoided when these adhesives are pigmented differently

Aesthetics

- Colour makes the end product attractive, e.g. coloured tamper-evident seals for security bags.
- Any colour under the sun: Collano hotmelt adhesives can be produced in nearly any pantone colour that customers desire. This applies to company colours and logos as well.

Cost-saving, convenient and environmentally friendly

- A coloured adhesive can substitute the need for colour printing and eliminates an additional production step.
- Collano hotmelt adhesives are 100%-solid systems and solvent-free.

Wide range of applications

Coloured Collano hotmelt adhesives are suitable for security applications, product identification, labels and adhesive tapes. We choose the right adhesive to suit the application area, substrate and type of processing, and colour it in the desired hue during manufacture.
